Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

Sincerely,

LaSandra Brill
215 Saratoga Ct
Santa Clara, CA 95050

Commissioner Jonathan Adelstein

Dear Commissioner Adelstein,

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,
LL Howard

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

These true open access standards should apply to the entire wireless market.

I believe that for America to remain competitive in the global marketplace, our government should use the 700 MHz spectrum to create a public network, using tax revenues to build a nationwide network for internet access that will be free for all Americans to use. This is the only way that we can move ahead and remain dominant in the global marketplace.

If we require all cell phones to be usable on any network and create an alternate public network subsidized by taxes imposed on communication companies profits, we can boost the economy and innovation, make America more competitive and efficient, and give people an alternative to the corporate monopolies and controls they impose.

How is it that we can have three large wireless companies, and yet all have exactly the same pricing structures. This exists because there is no competition. These companies like ATT, Verizon, and Sprint, have formed an alliance to create a virtual monopoly and in so doing have hurt America. Our airwaves must be used for the public good, and to do so we must use our spectrum to create a public owned network to force an alternative and create competition.

As a citizen, I require you to act on this and look after our airwaves for the public's best interests. We should not allow corporate interests to control our airwaves, we must take steps to improve the affordability of internet and cellular access through the creation of a public communication system with open access to all.

Sincerely,

Marc Ferris

Dear Federal Communications Commission,

We might wish that "things would stay the same," but, they won't. Information used to be controllable - that is all but word of mouth, and now that has evolved to the wireless world, in all its many forms. Now, the FCC and political wishfull thinking must change along with the times. As we all recognize, the iPhone has set the stage for the future of mobile Internet -- but bad policies currently allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
